***These data are from persons reporting American Indian/Alaska Native race and addresses on tribal land. "Tribal land" is defined by boundaries for each tribe's land (including trust land) in the United States Census Bureau's TIGER/Line Shapefile (<https://catalog.data.gov/dataset/tiger-line-shapefile-2019-nation-u-s-current-tribal-block-group-national>).**

Cases: Persons who meet the national surveillance case definition for COVID-19. According to the case definition, Confirmed Cases includes persons with a positive RT-PCR test and Probable Cases includes persons with a positive antigen test for the SARS-CoV-2 virus that causes COVID-19. A confirmed or probable case moves from Active to Recovered status based on the CDC guidelines for removal from isolation.

Hospitalized: Ever Hospitalized include COVID-19 cases that were, at some point during their infection, hospitalized under transmission-based precautions. The number of persons ever hospitalized are cumulative and includes only South Dakota resident cases. Data are reported from the Maven electronic disease surveillance system.

Deaths: These epidemiological death data reflect people who died with COVID-19, but COVID-19 may not have been the

Note: Data are provisional and subject to change. Data are updated weekly and include cases, hospitalizations, and deaths reported through 1 p.m. on the final day of the reporting period. Data reported to SD-DOH during the last 7 days include cases, hospitalizations, and deaths reported from 1 p.m. on the first day of the reporting period through 1 p.m. on the final day of the reporting period.

These data are from persons reporting American Indian/Alaska Native race and addresses on tribal land. "Tribal land" is defined by boundaries for each tribe's land (including trust land) in the United States Census Bureau's TIGER/Line Shapefile (<https://catalog.data.gov/dataset/tiger-line-shapefile-2019-nation-u-s-current-tribal-block-group-national>).

Cases: Persons who meet the national surveillance case definition for COVID-19. According to the case definition, a confirmed case includes persons with a positive RT-PCR test and a probable case includes persons with a positive antigen test for the SARS-CoV-2 virus that causes COVID-19. A confirmed or probable case moves from active to recovered status based on the CDC guidelines for removal from isolation.

Hospitalized: Refers to a person ever being hospitalized at some point during their COVID-19 infection. The number of persons Ever Hospitalized are based on cumulative numbers from the state's electronic disease surveillance system and reflect current and prior hospitalizations.

Deaths: These epidemiological death data reflect people who died with COVID-19, but COVID-19 may not have been the cause of death listed on the death certificate. It comes from two sources: 1) State-reviewed death certificates. a) From state-reviewed death certificates where COVID-19 is listed as the cause of death. b) From state-reviewed death certificates where COVID-19 is listed as a significant condition contributing to death. 2) National case reporting. From healthcare providers and laboratories that report cases to the state using a national surveillance case definition. This includes deaths within 20 days of infection that do not have COVID-19 listed on the death certificate.

Note: Data are provisional and subject to change. Data are updated weekly and include cases, hospitalizations, and deaths reported through 1 p.m. on the final day of the reporting period. Data reported to SD-DOH during the last 7 days include cases, hospitalizations, and deaths reported from 1 p.m. on the first day of the reporting period through 1 p.m. on the final day of the reporting period.
