

Lower Brule Sioux Tribe (LBST) COVID-19 Weekly Tribal Report | 20 January 2021 Week of 01.11.21 - 01.17.21

ALERT LEVEL 3	<p>Current Alert Level: Lockdown</p> <p>There is high community spread of COVID-19. People should stay at home for all but essential activities. Wear a mask for all activities outside your home.</p>
--------------------------------	---

Updates:

-The US has now had over 400,000 deaths from COVID-19. Although the vaccines bring hope that we can get the pandemic under control, reports of highly transmissible new strains of COVID-19 are concerning. While we work quickly to get our communities vaccinated, we need to continue to keep people safe by wearing masks, social distancing and washing our hands. These measures can save lives now.

-We have created an online tool to help you calculate the values on this report. Go to: <https://gptec.gptchb.org/covid-19/great-plains-area-covid-19-surveillance-data/> and click on the "Alert Indicator Calculator" button. You can then use the tool and your local data to calculate the indicator values. Please contact us with any questions.

-Due to the holiday, the hospitalization data was not updated through 1/18/21. This report uses the most recently reported data.

LAST WEEK	Indicators	LBST, PRC Counties	LBST, Tribal Specific Data
	Test Positivity	30%	
	New Cases Daily (per 100,000)	42	
	Change in New Cases	-12%	
	COVID Hospitalizations	10%	

Recommendations:

- Universal mask wearing is recommended when outside your home.
- Stay at home except for essential activities like getting food or medicine; receiving medical care; or going to work.
- Only get together with the people you live with. Do not get together with friends or family that live in other households.
- When not at home, stay 6 feet away from other people and wear a mask.
- Schools should be virtual.
- Everyone who can do their job remotely should work from home.
- Only essential businesses should remain open to the public and they should have safety precautions in place, such as maintaining 6 feet of distance between people and universal mask wearing.
- Gatherings and public events should be cancelled.

Alert Level Definitions

LEVELS	<u>Level 1: Take Care</u>	<u>Level 2: Caution</u>	<u>Level 3: Lockdown</u>
		<p>MEDIUM RISK OF INFECTION</p> <p>Tribes in Level 1 have low levels of virus in the community. People usually know how they became infected. Being careful will help keep the spread of the virus low. Return to community spread is possible without early detection.</p>	<p>HIGH RISK OF INFECTION</p> <p>Tribes in Level 2 have virus in the community, but there are fewer people infected than in Level 3. People can get sick without knowing where they caught the virus. We can reduce the spread of the virus by limiting some activities.</p>

Indicator Cutoffs

Indicators	Green	Yellow	Red
Test Positivity	<5%	5-9%	≥10%
New Cases (per 100,000)	<10	10-24	≥25
Change in New Cases	<-10%	-10-10%	>10%
COVID Hospitalizations	<5%	5-10%	≥10%

Notes:

The GPTCHB Report is a living document. Indicators, cut off values, and recommendations may change as the science on COVID-19 evolves. We will note when indicators or recommendations are changed and why. Each tribe's alert level is based on the most current information available to best reflect the risk of COVID-19 in the community and what tribes can do to reduce the spread of the virus.

About:

Test Positivity: Percentage of tests positive over the last 7 days

Calculated using data from each state's website for each PRC county. Should include unique individuals only based on CDC definitions, but we cannot verify if there are duplicates.
Percent test positivity = (Persons tested positive in past 7 days/persons tested in past 7 days)*100

New Cases: Average number of new cases per day per 100,000

Calculated using data from each state's website for each PRC county.
Case counts = (average number of new cases day/population)*100,000

Change in New Cases: Percentage change in the number of cases over last two weeks

Calculated using data from each state's website for each PRC county.
Change in case counts = [(new cases in past 7 days)-(new cases in past 8-14 days)]/(new cases in past 8-14 days)

COVID Hospitalizations: Percentage of hospitalized patients with COVID

Calculated using data from HeathData.gov website. For tribes that have PRC counties or land in multiple states, the state in which the tribe is headquartered and/or the largest on-reservation healthcare facility is located.
Percent of COVID Hospitalizations = Average percent of total hospitalizations occupied by COVID patients over last 7 days
